Arizona Secretary of State
UCC Data Export Format
Effective February 2010

This product is delivered in three tab-delimited text files and 100 folders that contain images.

The periodic export contains all new liens and all liens who's status (active, terminated, lapsed, deleted) has changed during that period. Deleted liens may or may not have any Filing or Name records associated with them. The full export contains all records with their current status and does not contain any deleted liens. See the LienStatus field description in the Liens.txt table below for more about these statuses.

Liens.txt

LienID – Alphanumeric field. Primary Key for this table. The field is formatted with hyphens. This formatting allows the Lien ID to be entered verbatim as search criteria in the Secretary of State's online UCC search. Since we maintained Lien IDs from legacy systems, there are several formats possible, diagrammed below. In each case, the last digit is the check-digit, which may not have been included on previous documents and in previous data. In the following chart, X=numeric digit (0-9), YYYY=four digit year, C=check digit.

X-C
XX-C
XXX-C
XXXX-C
X-XXXX-C
XX-XXXX-C
XXX-XXXX-C
YYYY-XXX-XXXX-C

LienTypeID – Integer field. Here's the List of Lien Types:

LienTypeID	Lien Type	Duration
1	Standard	6 years
2	Tax	non-expiring
3	Utility	non-expiring
4	Restitution	non-expiring
5	Racketeering	non-expiring
6	Bulk Sale	2 years
7	Mobile Home	non-expiring

LienStatus – 1-character alphabetic field. Indicator of the current status of the lien. Here's the list of statuses:

- A   Active
- E   Expired
- T   Terminated
- D   Deleted

- *Active Liens* are either:
  - non-expiring liens that haven't been terminated or
  - expiring liens that have not expired.
- *Expired Liens* are expiring liens that are past their expiration date.
- *Terminated Liens* are non-expiring liens that have been terminated.
- *Deleted Liens* are over a year past being terminated or lapsed.

FiledDate – Date/time field. The date the lien was registered with our office.

ExpirationDate – Date/time field. The date the filing is to expire or has expired.

TerminationDate – Date/time field. If this lien has been terminated, this will be the date of the termination

Filings.txt

This table holds the many filings that could be attached to each lien.

FilingID – Integer field. Primary key for this table.

LienID – Alphanumeric field. Foreign key to the Liens table (Liens.txt).

FiledDate – Date/time field. The date this filing was received by our office.

FilingTypeID – Integer field. Numeric indicator of the type of filing.   Here's the list of FilingTypes:

FilingTypeID	Filing Type
1	Amendment
2	Bankruptcy
3	Continuation
4	Disposition of Collateral
5	New Filing
6	Officer Correction Statement
7	Partial Release
8	Assignment
9	Termination
10	Bankruptcy Release
11	Correction Statement
12	Search Request

ImageName – Alphanumeric field. Path and filename of the image associated with this filing.

Names.txt

This table holds the many debtors and secured parties that may be associated with a filing.

FilingID – Integer Field. Foreign key to the Filings table (Filings.txt)

IsDebtor – Alpanumeric field. If "True", the name is a debtor. If "False" the name is a secured party.

CompanyName – Alpanumeric field that contains the name of organization Only used if the name is an organization.

LastName – Alpanumeric field that contains the last name of individuals. Only used if the name is identified as an individual.

FirstName – Alphanumeric field. Only used if the name is identified as an individual.

MiddleName – Alphanumeric field. Only used if the name is identified as an individual.

NameSuffix – Alphanumeric field. Only used if the name is identified as an individual.

Address1 – Alphanumeric field. If the Country field contains anything except "US", this will contain a free-form address field for a foreign address.

Address2 – Alphanumeric field. If the Country field contains anything except "US", this will be empty.

City – Alphabetic field. If the Country field contains anything except "US", this will be empty.

State – 2-character alphabetic field. If the Country field contains anything except "US", this will be empty.

ZipCode – 10 character alphanumeric field. If the Country field contains anything except "US", this will be empty.

CountryCode – 2-character alphabetic field. The country code, as defined by *ISO 3166-1* (alpha-2). The user assigned value of "ZZ" may also be found in the legacy data.
